OVERVIEW

Multiple coupon Magento Extension enables the customer to apply multiple coupons to increase their loyalty.

It's very inconvenient for your customers and even a bit absurd to place several orders to be able to use all coupons. Some customers will get discouraged to place additional orders, which converts into lost revenue for you. Imagine, your customer has 2 coupons: 10% Magento discount code on every piece and 10\$ flat discount. If she wants to make a significant purchase, she will be happy to use both coupons at once, while you'll get a loyal customer as a result.

Features

- The Extension made as per Magento programming guidelines.
- Easy to use multiple discount coupons at the time of order placement.
- No technical skills or manual configuration required.
- Customer can add multiple coupon option on product page.
- User will able to check price per coupon into front end.
- Completely responsive design which support all devices.
- User can apply coupon code in checkout review page.
- The capacity to utilize coupon codes which can't be utilized together with different codes.
- Store holders can permit multiple discount coupons from same shopping cart and value tenet for every request.
- 100 per cent open source.
- This Extension also supports latest release of Magento i.e. 1.9 CE and 1.14 EE.
- Easy installation

Installation Steps

1. Clear the store cache under **var/cache** and all cookies for your store domain.
2. Disable compilation for Magento 1.4+. Log into Magento **Admin Panel** and go to **System → Tools → Compilation** and disable the compilation.

Dashboard Sales Catalog Customers Promotions Newsletter CMS Blog Reports **System** Get help for this page

Compilation Enable Run Compilation Process

Compilation State	
Compiler Status	Disabled
Compilation State	Compiled

Be sure that the Compilation Code is disabled (System->Tools -->Compilation)

Installation Steps

3. Disable JS & CSS merging

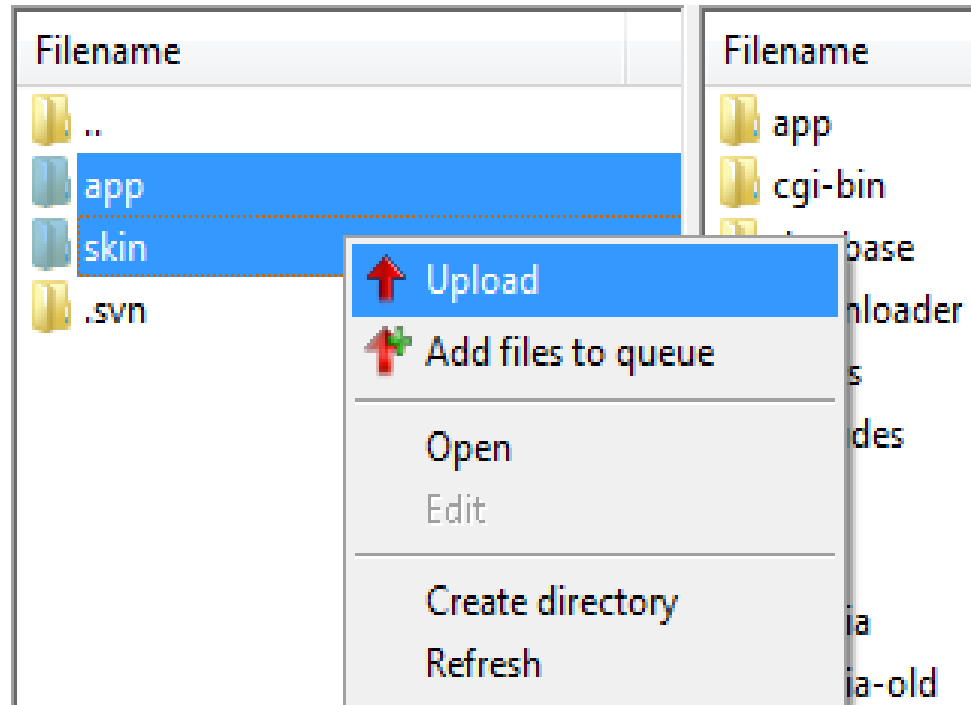

Navigate to System->Configuration->Developer Tab and disable "Merge css / js". We suggest that you enable error reporting.

The screenshot shows the Magento Developer configuration page. On the left is a navigation menu with sections: Configuration (GENERAL, Web, Design, Currency Setup, Store Email Addresses, Contacts, Reports, Content Management) and WEB-AND-PEOPLE (About Us, External Backend Notifications Disabler, Support, Gif Animate, Advanced Slider, Preload Images, Smart Columns). The main content area is titled 'Developer' and contains several sections: Developer Client Restrictions, Debug, Translate Inline, Log Settings, JavaScript Settings, and CSS Settings. In the Log Settings section, the 'Enabled' checkbox is circled in blue. In the JavaScript Settings section, the 'Merge JavaScript Files' dropdown is set to 'No' and is circled in blue. In the CSS Settings section, the 'Merge CSS Files (beta)' dropdown is set to 'No' and is circled in blue. A blue callout box points to the 'Merge JavaScript Files' dropdown with the text: 'Navigate to System->Configuration->Developer Tab and disable "Merge css / js". We suggest that you enable error reporting.'

Installation Steps

4. Upload file manually

If you use a different from default theme - be sure to rename **app/design/frontend/default/default** and **skin/frontend/default/default** folders to your store's values. Using your FTP client upload content to your store root.

Installation Steps

5. Clear Cache

Cache Storage Management

Select All | Unselect All | Select Visible | Unselect Visible | 0 items selected

Actions Refresh 

Cache Type	Description	Associated Tags	Status
<input type="checkbox"/>		CONFIG	
<input type="checkbox"/>		LAYOUT_GENERAL_CACH	
<input type="checkbox"/>		BLOCK_HTML	
<input type="checkbox"/>		TRANSLATE	
<input type="checkbox"/>			
<input type="checkbox"/>	EAV types and attributes	Entity types declaration cache.	
<input type="checkbox"/>	Web Services Configuration	Web Services definition files (api.xml).	
<input type="checkbox"/>	Web Services Configuration	Web Services definition files (api2.xml).
